

The OneSix Ideal Client Profile and the people who buy

Part 1: Ideal Client Profile & Buyer Personas | Part 2: Ideal Client Project

Working draft v2 · July 2026

What ICP² unlocks

Understanding our target clients' firmographics, demographics, and technographics will result in....

How we go to market

Who we market to

Which clients we target

What we qualify in pipeline

Which capabilities we build

How we keep score

Informed by the past, not defined by it

01

Grounded in best practice

The strongest ICPs are built bottom up from a firm's best clients, sharpened with explicit disqualifiers, and validated quarterly against actual wins.

02

Mined from our history

Three years of HubSpot and Harvest data: 780 closed deals and 312 wins, analyzed for the types of clients where OneSix wins and grows.

03

Built for what's next

The exercise is forward looking: two strategic bets (Snowflake center of gravity, minimum \$150k+ new logo engagements) and a view of where we think the market is headed, so we can be there when our clients are ready.

Where OneSix actually wins

40%

overall win rate

312 deals won of 780 closed

64% vs 34%

retainers vs one-off projects

Recurring vehicles are the winning engagement shape

68% vs 13%

change orders vs true net-new

Land-and-expand is the core motion, and the cheapest revenue we earn

53%

of won value from deals $\geq$ \$250k

Just 39 large deals drove over half of all value won

~\$50k

historical median deal size

The floor this ICP deliberately leaves behind

~36%

win rates in analytics & data engineering

Our best win rates are in the data wing. AI/ML wins less often (24%) but bigger (\$117k median)

THE ICP IN ONE SENTENCE

Our ideal client is a \$250M to \$10B company with executive conviction to transform the business through data and AI, has a thin internal data and ML team, and an ongoing operational need, preferably on Snowflake or committed to getting there: one that lands at \$150k+ and grows into a recurring partnership of at least \$1M ACV.

And OneSix has the right to win this space. AI native since day one, not a pivot. A Snowflake practice at the center of the platform conversation. Proven wins and solid case studies drive credibility in the data and AI space.

If a prospect can't be described in a sentence like this, they're not our ICP.

New logos and existing accounts

Net-new logos: the hunt

- A \$150k floor applies.
 - True new business wins 13%, and 24% at stage 2+
 - A \$150k+ entry is worth ~17x a sub-\$50k one for LTV
-

Existing accounts: the growth

- Identify the whitespace map within each account - the floor does not apply to whitespace within growth accounts
 - Change orders win 68%
 - Harvard is the best example here: one logo, three buying centers.
-

Same client, same doors

Same buyer, same project shape, same paper process. Create a repeatable motion

Big enough to matter, small enough to need us

Corporates in the band

Real data problems and real budget, without the in-house engineering armies that make companies build rather than buy. Entry-point titles shift with size (see personas).

With an overlay of industry verticals

The point of the framework: it keeps us intensely focused on who the ideal client is, regardless of which vertical we are selling into. Below the band there is no budget for \$150k engagements; above it we would be selling to middle management against entrenched incumbents. Verticals are detailed on the next page.

Horizontal core, five focus overlays

The core ICP is horizontal, defined by situation and fit, not industry. These overlays direct where we build referenceable depth, content, outbound lists and targeted marketing materials.

VERTICAL

Higher Education

Student lifecycle, donor propensity, institutional analytics. 36 historical deals, \$3.1M won.

Harvard Business School, San Jacinto College, CIEE, Carnegie

VERTICAL

Healthcare & Life Sciences

Patient/member 360, demand forecasting, compliance grade data. ~\$3.4M won across HC + pharma.

AbbVie, UTHealth Houston Chordline Health, Fresenius

VERTICAL

Manufacturing

Demand forecasting, quality & vision, supply-chain analytics. 44 won deals, ~\$4.7M won since mid-2023.

Lenovo, Niagara Bottling, Astro Pak, Able Electropolishing

VERTICAL / CHANNEL

PE Firms

Diligence and portfolio value creation. Our highest-frequency segment: ~16 firms, 53 deals, and strong BluWave momentum.

BDT Capital, Stephens Group, Twin Bridge

HORIZONTAL / FUNCTION

The Marketing Function

CMO/growth buyers across industries: customer 360, attribution (MMM), personalization, loyalty. ~27 deals, ~\$7.9M won

Wind Creek, Bark Lenovo

Vertical and horizontal slots stays open by design. The framework flexes as we earn the right to win in new verticals.

Snowflake is the center of gravity

Migrating to Snowflake

...or needs to and doesn't know it yet. Legacy warehouse end-of-life, M&A consolidation, on prem to cloud, cost pressures. This is the priority wedge, and a co-sell motion with Snowflake's sales team.

Already on Snowflake

Foundations in place, ready for the AI work on top: Cortex, ML, agentic workloads. Often our best clients; the platform conversation is over and the value conversation starts.

Thin internal team

They lack the data/ML engineering capacity to execute at the pace the business demands. They need builders delivering outcomes, not bodies.

Foundations-first mindset

They understand data foundations must be in place for AI to work. Not looking for AI magic on top of broken data.

Not a hard filter: companies on other modern platforms can and will qualify, but Snowflake alignment is the default and the go-to-market engine.

Two wings, six doors that an ICP can enter through

DATA WING: THE FOUNDATION

Our best historical win rates (~36%)

- 1 Strategy & Governance**
Guide organizations to leverage their data assets with speed, clarity and trust with a focused plan.
- 2 Modernization & Migration**
Move to Snowflake, replatform off legacy warehouses
- 3 Analytics & Activation**
Turn the data they have into insights, decisions & revenue

AI WING: THE TRANSFORMATION

Fewer, larger wins (\$117k median in ML/AI) · Enablement is the wedge that opens these doors, not a door itself

- 4 Agentic Automation**
Organizational intelligence and automation through conversational and dynamic experiences.
- 5 Predictive Automation**
Real time and near real time actions impacting the business and consumers.
- 6 Decision Science**
Bespoke models for business domain experts with high-accuracy, high-value insights

Enter anywhere, expand everywhere. For existing accounts, the doors are the whitespace map: which doors are still closed at this client? The wings connect (next slide).

Enter anywhere, expand everywhere

The wings connect

A client entering an AI door discovers they need the data wing: foundations first. A client entering a data door has a natural path into the AI wing. This is the land-and-expand motion: retainers win 64%, change orders 68%.

Governance should be a thread through EVERY door

Historically, governance can be difficult to sell as a standalone project (14% historical win rate). However, if we weave governance into the fabric of ALL our solutions (Data & AI), we will show our clients why integrating governance creates more trusted, save, and impactful outcomes. The door for governance can either be a supporting feature of a different project, or with a tightly controlled, smaller use case.

Doors are entry points, not destinations

Any door qualifies only when the client sees it as the start of something bigger. The door determines the project shape (Part 2: Ideal Client Project), not the client profile.

Enter anywhere, expand everywhere

The wings connect

A client entering an AI door discovers they need the data wing: foundations first. A client entering a data door has a natural path into the AI wing. This is the land-and-expand motion: retainers win 64%, change orders 68%.

Governance is a thread, not a door

Clients rarely buy governance standalone (14% historical win rate). Instead, every engagement leaves data governed: quality, security, lineage, and AI governance built into every delivery.

Doors are entry points, not destinations

Any door qualifies only when the client sees it as the start of something bigger. The door determines the project shape (Part 2: Ideal Client Project), not the client profile.

What creates urgency, and how the ideal client buys

— TRIGGERS

AI mandate

Board or C-suite pressure to ship outcomes, not roadmaps

Snowflake migration

Planned, in-flight, or forced by legacy end-of-life

Corporate events

Acquisition, carve-out, PE transaction, new data or AI leader

Recurring operational need

Ongoing data ops that fit the Dedicated Data Team model

— CLIENT BUYING PROCESS

Named executive sponsor

With conviction and a substantiated budget. No sponsor, no pursuit

Outcome-driven procurement

Selects on value and capability, not lowest hourly rate card

Get started and expand on results

A \$150k+ first engagement with a path to recurring work and \$1M ACV

Four disqualifiers and two caution flags

1

No conviction to transform

Dabbling, AI theater, pilots without commitment. If leadership doesn't believe the business must change, no engagement succeeds.

2

Below the deal-size floor

New-logo initial engagements under \$150k. The floor gates new logos only. Exempt: all existing-client expansions, change orders, and renewals, plus strategic investments with big upside.

3

Rate-shoppers

Procurement-led, rate-card RFPs decided on price, not outcomes.

4

No sponsor, no budget

No named executive sponsor or unsubstantiated budget. The “ghosted / no response” graveyard.

CAUTION FLAGS (NOT AUTO-DISQUALIFIERS)

Strategy-only buyers (17% win rate) are fine when attached to build intent. Standalone governance buyers (14%): sell the thread.

ADOPTING THIS KNOWINGLY

The \$150k floor is a deliberate upmarket move: historical new logo median has been ~\$45k, so new-logo volume drops and average deal size must roughly 3x. That is the strategy, not a side effect. The deal desk carries the no, so no seller has to defend it alone.

THE ONE-SENTENCE TEST

Can you say why they fit our ICP?

✓	“\$800M PE-backed manufacturer, new CDO, migrating to Snowflake, can't hire a data team fast enough. Starting with a \$175k foundation build.”	Modernization - Data Ops
✓	“University system on Snowflake with a board-level AI mandate. An AI front door for student services, \$200k phase one.”	AI Experiences - Higher ed
✓	“CMO of a \$2B HCLS company can't attribute spend or personalize. Wants a customer data foundation on Snowflake.”	Analytics - Marketing
x	“A \$30M company wants a \$20k AI roadmap and will take it from there.”	Under band, under floor, no build intent
x	“Enterprise RFP scored 70% on rate card.”	Rate-shopper
x	“Two-day LLM workshop for the leadership team, no budget or plan beyond it.”	Wedge with no door attached

FROM COMPANIES TO PEOPLE

Six buyer personas on two axes

The ICP defines the company. Personas define who inside it opens a door, mapped by buyer type and data/AI maturity.

Business buyers with high maturity walk through AI-wing doors; technology buyers and lower-maturity operators mostly enter through the data wing. The PE Operating Partner spans both, portfolio-wide.

The entry title slides down as company size grows

\$250M – \$500M	\$500M – \$1B	\$1B – \$10B
FIRST-CONTACT TITLES CEO · President · CFO · COO	FIRST-CONTACT TITLES CDO · CIO · CTO · CMO · SVP Data/IT	FIRST-CONTACT TITLES SVP/VP/Director of Data, IT, Product · Head of DS · LoB GM
HOW TO SELL The chief executive is reachable and decides. Sell the transformation program directly: strategy attached to build.	HOW TO SELL A real data org is forming. Sell engineering-led packages to the functional executive; CEO sponsors.	HOW TO SELL Committee buys, incumbent vendors. Sell capacity and specialized builds; expand department by department.

Why it matters: the same \$150k engagement is a CEO decision at \$300M, a CDO decision at \$700M, and a VP decision at \$5B. Message, package, and route accordingly: persona and size determines our GTM motion.

The Transformation Chief Executive

BUSINESS BUYER · HIGH CONVICTION

EXAMPLE TITLES

CEO / President (\$250M–\$1B) - BU
President, GM (\$1B+)

DOORS & OVERLAYS

Doors: Agentic Automation and Predictive Automation built on
Modernization & Migration and Analytics & Activation
foundations.

Overlays: all verticals.

HOW TO MESSAGE

Outcomes and speed: strategy and build in one
firm, with proof of dollar impact on measurable
business outcomes and ROI.

NEEDS & GOALS

New revenue streams,
differentiation, cost reduction

Valuation growth and wins the
board can see

One accountable partner from
strategy through build

WHAT THEY FEEL

Urgency from board and
competitors

Frustrated with internal pace

Wary of AI theater and consultant
fatigue

OBJECTIONS

“We've bought decks before.
Where's the build?”

Fear of betting on the wrong
partner

Board scrutiny on AI spend

WHAT THEY BUY

Transformation program: strategy
attached to build

Data foundations and AI
outcomes on Snowflake

Operating partnership

The Growth CMO

BUSINESS BUYER · MEDIUM-HIGH MATURITY

EXAMPLE TITLES

CMO, SVP Growth/Digital (\$250M–\$1B) ·
VP Marketing Analytics/Ops (\$1B+)

DOORS & OVERLAYS

Doors: Analytics & Activation first, expanding into Predictive Automation and Decision Science.

Overlays: the Marketing function, across all verticals.

HOW TO MESSAGE

Marketing outcomes on their own data, use-case led. Direct marketing motion plus the Snowflake channel.

NEEDS & GOALS

Customer 360 and attribution (MMM)

Personalization, loyalty and next-best-action at scale

Prove marketing ROI to the CFO

WHAT THEY FEEL

Pressure to prove spend efficiency

Frustrated the data lives everywhere but marketing

Excited by AI, burned by martech promises

OBJECTIONS

“We already have a CDP”

Agency and martech fatigue

IT gatekeeping on data access

WHAT THEY BUY

Customer-data foundation on Snowflake

Activation use cases: C360, churn, propensity, MMM

Measurable ROAS / LTV lift

The Pressured Operator

BUSINESS BUYER · LOW AI MATURITY

EXAMPLE TITLES

BU / GM, LoB leaders · Ops executives in manufacturing, HCLS, higher ed

DOORS & OVERLAYS

Doors: Predictive Automation or Agentic Automation, entered through the enablement wedge of workshops and showcases.

Overlays: Manufacturing, Healthcare & Life Sciences, Higher Education.

HOW TO MESSAGE

Educate and build confidence. Start small, always with a path. Enablement is the wedge, never the destination.

NEEDS & GOALS

A credible, defensible starting point

AI literacy for their team

Quick safe wins that build momentum

WHAT THEY FEEL

Board pressure to “do AI”, overwhelmed by hype

Afraid of rash bets, and of being left behind

Insecure about limited AI knowledge

OBJECTIONS

Skeptical of vendors over-promising

Limited budget authority

Fear of disrupting operations

WHAT THEY BUY

AI literacy and enablement as step one of a program

Workshops that graduate into agentic pilots

POCs with roadmaps to production

Larger deals with stage gates

The Build-Capable Data Leader

TECHNOLOGY BUYER · HIGH MATURITY

EXAMPLE TITLES

CDO, CAIO (\$500M–\$1B) · Head of Data/DS, VP Data Engineering (\$1B+)

DOORS & OVERLAYS

Doors: Data Operations and Agentic Automation.
Overlays: all verticals.

HOW TO MESSAGE

Peer-level technical credibility. We make you faster, not replaceable. In depth technical case studies, never one-pagers.

NEEDS & GOALS

Capacity and velocity: can't hire fast enough

Senior engineers who ship in their stack

State-of-the-art depth on demand

WHAT THEY FEEL

Pressure to show results org-wide

Strong conviction in AI as transformation

Protective of architecture and standards

OBJECTIONS

“My team can do this”
(not-invented-here)

Skeptical of vendor technical depth

Security and data-access concerns

WHAT THEY BUY

Dedicated Data Team and capacity retainers

Bespoke ML / AI builds

Embedded senior talent

The Modernizing CIO / CTO

TECHNOLOGY BUYER · LOW-MEDIUM MATURITY

EXAMPLE TITLES

CIO / CTO (\$500M–\$10B) · Higher-ed and healthcare CIOs

DOORS & OVERLAYS

Doors: Modernization & Migration, expanding into Data Operations.

Overlays: Healthcare & Life Sciences, Higher Education, Manufacturing.

HOW TO MESSAGE

Migration proof points, TCO math, and Snowflake partner credentials. Foundations that make AI possible.

NEEDS & GOALS

Off legacy warehouses: cost and risk control

Consolidation onto Snowflake

A partner their IT team will accept

WHAT THEY FEEL

Squeezed between cost pressure and the AI mandate

Skeptical from past SI experiences

Anxious about compliance and security

OBJECTIONS

Price sensitivity, incumbent vendors

“My team says they can do it”

Burned by consultants that didn’t deliver in the past

WHAT THEY BUY

Snowflake migration and platform build

Managed data operations after cutover

Co-sell motion with Snowflake's field team

The PE Operating Partner

CHANNEL PERSONA · PORTFOLIO-WIDE

EXAMPLE TITLES

Operating Partner, MD Portfolio Ops, Deal Partner, Portfolio CTO, Head of Portfolio Operations

DOORS & OVERLAYS

Doors: all six potentially

Overlays: PE Firms as the channel; portfolio companies land across all verticals.

HOW TO MESSAGE

One firm, whole portfolio. Value creation inside the hold period, references from other PE firms.

NEEDS & GOALS

Value Creation, EBITDA growth and exit readiness across portcos

Data / AI diligence pre and post close

A repeatable playbook, not one off projects

WHAT THEY FEEL

Competitive and returns focused

Skeptical of unproven vendors

Limited bandwidth to drive change across portfolio

OBJECTIONS

Prefers known partners and Big 4 brands

Adjusted-EBITDA optics on consulting spend

Year-one budgets locked pre-close

WHAT THEY BUY

Data / AI diligence engagements

Portfolio data foundations on Snowflake

AI opportunity analysis across all portcos

Value creation plans

Aligning the ICP to use cases and owned IP

	Marketing	Data & AI Solutions	Healthcare & Life Sci.	Higher Education	Manufacturing	Private Equity

Accelerators are the owned-IP library from the May 2026 board deck. Governance appears in no column by design; it is the thread through every engagement.

Part 2: The Ideal Client Project

The shape of work we sell, deliver, and build capabilities around

Complement to Part 1: Ideal Client Profile & Buyer Personas

Working draft v1 · July 2026 · Internal and confidential (contains margin and delivery data)

Won and successful are different lists

01

Part 1 asked who buys

Win/loss data defines the ideal client: the company, the doors, the personas. That work is done.

02

Part 2 asks what compounds

The defining evidence here is delivery-side: which projects expanded, stayed on budget, and became recurring vehicles. Analyzed all 780 closed deals (312 won) and all 280 Harvest projects.

03

Together: one combined test

The right company, entering through a named door, buying a project of the right shape. That is what qualifies pipeline, aims marketing, and sets the future capability roadmap.

— THE EVIDENCE BASE · ALL 780 CLOSED DEALS + ALL 280 DELIVERED PROJECTS

What the delivery data says

68% vs 13%

change orders and extensions vs true net-new

True first-time new business wins just 13%. The cheapest revenue is phase two of a project we already delivered

97 days

median time from first win to second win

51% of clients ever expand. The expansion must be designed, not hoped for

15x

lifetime value of a \$150k+ entry vs sub-\$50k

Median LTV by first deal: <\$50k gives \$29.6k; \$50-150k gives \$150.4k; \$150k+ gives \$434.9k

88 vs 67 days

first-project length: expanders vs one-and-done

The ideal first project runs about a quarter: long enough to prove value and identify expansion opportunities

27%

of 2026 fixed-fee projects overran, 11 of 41

Estimating and scoping discipline is the mandate, not a retreat to T&M vehicles

9 quarters

longest Dedicated Data Team renewal chain

19 DDT clients, 10 retainers, 37 support clients; recurring work is 29.3% of billable projects and rising

Margins favor foundational work: Data Governance 52.9%, Data 49.5%, AI 48.0% YTD. AI carries the biggest deals (\$117k median)

THE IDEAL CLIENT PROJECT IN ONE SENTENCE

The ideal OneSix project lands at \$150k+ on a named executive's budget, runs about one quarter with a senior build team on a modern cloud data platform, ideally Snowflake, leverages at least one accelerator, is priced to protect margin, and is engineered from day one to produce its own expansion: a change order, a next phase, or a recurring contract vehicle, decided before the project ends.

If a pipeline opportunity can't be described in a sentence like this, it is probably not an ideal project.

Ideal Client Projects have 7 attributes driving the shape

Any opportunity, in any door, is scored on seven structural attributes. We work on any modern data platform; we compound on Snowflake.

1

Entry size

\$150k+ new-logo initial engagement;
existing-client expansions exempt

~17x lifetime value vs sub-\$50k entries

2

Duration

About one quarter (10 to 14 weeks) to a
visible, demo-able outcome

Expanders' first projects: 88 days

3

Designed expansion

Discussed during the BD process. Next
phase named in the SOW, decided before
75% project completion

Change orders win 68%

4

Recurring-vehicle path

Credible route to a Dedicated Team,
retainer, or operating partnership in 2 to 3
phases

Recurring must grow 36% to 50% by 2027

5

Accelerator leverage

Uses at least one piece of owned IP
(scored, not required)

De-risks pricing and builds the IP flywheel

6

Pricing shaped to risk

Fixed-fee, outcome-based, or value-based
pricing is the mandate; T&M only as an
explicit, named exception

Only 27% of 2026 fixed-fee projects overran:
proof we can price risk

7

Platform & team fit

Modern cloud platform (graduated:
Snowflake scores highest), senior build
team, governance built in

Snowflake compounds co-sell and practice
growth

The attributes are structural on purpose:
topic and use case change by door; the
shape does not.

Any modern platform qualifies; Snowflake compounds

2

Snowflake, or migrating to it

Full strategic compounding: accelerators, co-sell economics, deal registration, and practice growth toward the 2027 targets (Snowflake-sourced revenue 5.3% to 25%).

1

Any modern cloud platform

Databricks, BigQuery, Fabric and peers, where our accelerators and senior staffing still apply. Delivery data shows no win or margin penalty.

0

Legacy stack, no path

On-prem or end-of-life warehouses with no modernization plan and no expansion logic: work we cannot staff, accelerate, or grow.

The score is graduated, not a gate. Platform mostly affects the door, not the welcome: Door 1 is inherently Snowflake because migration is the wedge; a Databricks client in Door 6 can still be a strong project.

The project scorecard: 7 attributes, 14 points

Score every qualified opportunity 0 to 2 on each attribute (0 absent, 1 partial, 2 strong). Scoring happens at qualification, wired into the deal desk and Estimatron, not retrospectively.

11 to 14

Ideal project

Pursue with priority. Staff senior. Protect the expansion design.

7 to 10

Conditional

Pursuable, but name the missing attributes in deal review and decide deliberately. A bespoke build with no IP leverage needs a margin story.

0 to 6

Anti-project

Decline, or escalate for an explicit exception with a named reason: strategic logo, vertical proof point, PE portfolio wedge.

Exceptions are allowed; silent exceptions are not. Every below-band pursuit carries a named reason and an owner.

Project archetypes: Entry points to data wing

1 MODERNIZATION & MIGRATION

Data Platform Migration

ENTRY SHAPE

\$150k to \$250k · Up to 1 quarter · Quickly move organizations to more modern tools and capabilities

ACCELERATORS

Snowflake Quickstart, Migration Accelerators for Snowflake and Maia, Domo Takeout Accelerator

DESIGNED EXPANSION

Set future state goals during sales cycle that are unlocked once migration is complete, leading to data development programs

PROOF / CAUTION

Harvard BP: Domo to Snowflake Migration
Marlin: Snowflake Modernization
CIEE: Domo to Snowflake Migration
Future Work: Matillion METL to Maia Programs

2 ANALYTICS & ACTIVATION

MVP Domain Analytics Build Out

ENTRY SHAPE

\$250k - \$500k · 1 to 2 quarters · Iteratively show value in building out greenfield solution for business domain

ACCELERATORS

Snowflake Quickstart, Coco Generative Code Accelerator, Data Model Domain Frameworks

DESIGNED EXPANSION

Deeper insights and analytics in first domain, activation across business lines to multiple domains, Dedicated Data Team for scaled support, expand to AI capabilities

PROOF / CAUTION

Stearns: Loan Domain Buildout
Live Nation: Setlist.fm Data & Analytics Buildout
Bulls: Marketing & Sales Analytics
Fresenius Kabi: Finance Data & Reporting
Xeris: Commercial Operations Reporting

3 DATA STRATEGY & GOVERNANCE

Governance Design & Use Cases

ENTRY SHAPE

\$250k - \$500k · 1 to 2 quarters · Parallel Governance design & pilot use case activation to show quick value

ACCELERATORS

Governance Observability, 25/10 Business User Survey Analytics, Horizon Catalog Accelerator

DESIGNED EXPANSION

Scaled out Governance use case build outs, cross sell into expanded data and AI platform analytics with trusted and certified data

PROOF / CAUTION

UTHealth: HR Governance Pilot on Informatica IDMC with headcount report use case
Spelman: Governance platform design & pilot use cases

Project archetypes: Entry projects - the data wing

1 MODERNIZATION & MIGRATION

Snowflake Foundation Build

ENTRY SHAPE

\$150k to \$400k · 1 to 2 quarters · Fixed Fee or Capacity

ACCELERATORS

Snowflake Quickstart, Governance Observability

DESIGNED EXPANSION

Data Operations (DDT) after cutover

PROOF / CAUTION

Harvard: Strategy, then Build, then Operating
Partnership across three buying centers

2 ANALYTICS & ACTIVATION

Customer / Student / Patient 360, Phase One

ENTRY SHAPE

\$150k to \$300k · one quarter to first activated use case ·
fixed fee with success kicker

ACCELERATORS

360 family, Churn Predictor, Media Mix Modeling, Next
Best Action

DESIGNED EXPANSION

Activation phase two, then marketing/analytics retainer

PROOF / CAUTION

Wind Creek Player LTV (\$9.7M lifetime).

3 DATA STRATEGY & GOVERNANCE

Dedicated Data Team

ENTRY SHAPE

Quarterly recurring · \$70k to \$95k+ per quarter ·
fixed-fee recurring

ACCELERATORS

Backlog-driven; Governance Observability as standard

DESIGNED EXPANSION

Renewal chain plus change orders: the destination
vehicle for both wings

PROOF / CAUTION

BDT Capital 9 consecutive quarters, Invenergy; cleanest
delivery shape

Project archetypes: the AI wing

4 AGENTIC AUTOMATION

Agentic Workflow Build

ENTRY SHAPE

\$150k to \$450k · one to two quarters · business-domain constrained use case with quick time-to-value

ACCELERATORS

AWS AgentCore Foundation, AI Harness Framework

DESIGNED EXPANSION

Agent expansion, augment with predictive intelligence, then operating partnership

PROOF / CAUTION

Quality Valve \$430K parts lookup agents; CIEE Student Assistant \$129K

5 PREDICTIVE AUTOMATION

Edge-Deployed Vision for QA

ENTRY SHAPE

\$250k to \$450k · two quarters · single line component model

ACCELERATORS

TorchCast, Vision AI Workshop

DESIGNED EXPANSION

Additional vision model for adjacent use case, maintenance and failure predictions, agentic layer on top

PROOF / CAUTION

Niagara Tip Detection \$222k, Amtote \$537K

6 DECISION SCIENCE

Media Mix Modeling

ENTRY SHAPE

\$150k to \$300k · one quarter · lower-maturity · build trust and progress to grow to automation

ACCELERATORS

Torchcast, Anomaly Detection

DESIGNED EXPANSION

Extend the model to predictive automation, agentic layer on top, operating partnership (model maintenance and expansion)

PROOF / CAUTION

Hand & Stone MMM \$150K, Crocs \$230K*

Project archetypes: Entry projects - the AI wing

4 AI EXPERIENCES

Customer-Facing AI Experience

ENTRY SHAPE

\$150k to \$400k · one to two quarters · one named user-facing experience, entered through the enablement wedge (workshop or showcase)

ACCELERATORS

Conversational AI, Document Intelligence

DESIGNED EXPANSION

Second experience or channel, then operating partnership; foundations check before anything ships

PROOF / CAUTION

Conversational AI for patient access and student services. The Innovation Showcase (HBS, Wind Creek, Fresenius, Stephens Group) is the wedge that opens every AI door

5 AGENTIC OPERATIONS

Agentic Workflow Build

ENTRY SHAPE

\$150k to \$450k · one to two quarters · one named workflow, measurable ops impact

ACCELERATORS

Document Intelligence, Conversational AI, agent platform patterns

DESIGNED EXPANSION

Second workflow, then operating partnership

PROOF / CAUTION

Astro Pak \$410k scheduling agent platform; AP Operating Partnership \$750k

6 BESPOKE ML / AI

Proprietary Model Build

ENTRY SHAPE

\$150k+ · fixed-price phases with success kickers, graduating to outcome-based · ML/AI median won is \$117k today, which is the number the floor exists to move

ACCELERATORS

TorchCast, Computer Vision AI where applicable

DESIGNED EXPANSION

Model operations and monitoring retainer (MLOps into DDT)

PROOF / CAUTION

Largest median deals and the brand halo; expansion design will drive ACV and the economics

What we decline, or escalate as deliberate exceptions

1

One-off fixed-fee custom builds with no accelerator or estimate to de-risk

If it must be fixed-fee, it must use owned IP and Estimatron-grade scoping.

2

Projects with no designed expansion

Without a named phase two before signing, we are buying a 34% win-rate one-off instead of a 68% change-order future.

3

Standalone workshops and assessments with no build intent

Enablement is the wedge, not the door: the Part 1 anti-ICP, restated for projects.

4

Inherited resale and pass-through work

No OneSix delivery content, value or differentiation.
The NetApp-cluster lesson: lost repeatedly, off-strategy even when won.

5

Sub-floor new-logo projects with no recurring path

Sub-\$50k entries produce \$29.6k median lifetime value, and half never expand.

6

Legacy or off-stack builds with no modernization path

Work we cannot staff, accelerate, or grow. Any modern platform qualifies; Snowflake compounds.

The gap to the ideal shape is the capability roadmap

1

Productize the accelerator library

7 accelerators as owned IP. Accelerator leverage only has teeth if the IP is packaged, priced, and demo-ready: the Snowtank pattern.

2

Make expansion a process

A standard week-8 expansion and scope-control review inside every project; account plans that pre-write the change order. The 97-day median says the window is one quarter.

3

Scale Continuum / Operating Partnership

The destination vehicle for every archetype. Serves the 2027 targets: recurring revenue 36% to 50%, NRR 62% to 80%, revenue per client \$200k to \$500k.

4

Fixed-fee estimation discipline

Estimatron plus accelerator baselines as the price of quoting fixed-fee. Timeboxed fixed-price phases replace T&M where uncertainty is high.

5

Talent and blended delivery

The senior client partner hire to lead account growth, a named sales engineer per overlay, and offshore capacity that protects margin at the \$150k entry point without changing the senior led shape.

6

Snowflake Elite

Cements the platform center of gravity that the compounding score assumes.

What ICP² unlocks

One combined test: the right company, entering through a named door, buying a project of the right shape.

How we go to market

Doors and archetypes replace generic capability selling. Every campaign leads with an entry shape, not a services list.

Who we market to

The personas who open each door, sized by company band, aimed at the four overlays plus PE.

Which clients we target

The \$250M to \$10B band, Snowflake-aligned, with conviction: target lists built from Part 1's fingerprint. Plus the accounts we grow: the doors still closed at each top account, run through the account planning cadence.

What we qualify in pipeline

Anti-ICP plus the 14-point project scorecard at the deal desk. Exceptions carry a named reason.

Which capabilities we build

The gap between today's project mix and the ideal shape: accelerators, expansion process, Continuum, estimation, offshore, Elite.

How we keep score

Quarterly: score wins against the framework; track expansion rate (51% of clients ever expand today) as the single most important KPI.

How we will use ICP²

1

Qualification

ICP definition, client personas and the 14-point scorecard become required fields on every new opportunity in HubSpot. No score, no stage advance. Owner: CRO. Client partners do the scoring.

2

Pricing and scoping

Estimatron enforces the pricing mandate and accelerator baselines before any fixed-fee quote goes out. Owner: sales engineering and client partners.

3

Delivery

The week-8 expansion and scope-control review is standing agenda on every project. Owner: head of delivery.

4

Accounts

Every top account will have an account expansion plan, reviewed on the Account OS cadence. Owner: client partners.

WHERE IT LIVES AND WHO OWNS IT

Doctrine lives in this deck; the teeth live in HubSpot, Estimatron, and the Account OS. The CRO owns adoption and quarterly validation against targets. Enablement is 90 days of practice, not a memo: the gate runs live in deal reviews until the scoring is instinct.

HOW WE MEASURE SUCCESS

Monthly: percent of pipeline as ICP scored, percent of new logos at \$150k+, percent of SOWs with a named phase two. Quarterly: expansion rate, new-logo win rate, average deal size, NRR.

When we will see results

1

Days 1 to 90: instrument it

Fields live in HubSpot, scorecard in the deal desk, week-8 reviews scheduled, team trained. Success here is coverage, not revenue: new pipeline scored as ICP.

2

Q1 to Q2: pipeline mix shifts

Fewer new-logo opportunities, larger average size, more SOWs with designed phase twos. Expansion rate is the first number that can move.

3

Q3 to Q4: bookings follow

Our active sales cycle runs about 217 days, so new-logo bookings reflect the framework two to three quarters after adoption. This is the patience the plan requires.

4

Months 12 to 18: it compounds

Recurring revenue and NRR climb toward the 2027 targets: recurring 36 to 50 percent, NRR 62 to 80 percent, revenue per client \$200k to \$500k.

WHAT WE SHOULD EXPECT

Fewer, bigger, stickier deals. Lower new-logo volume at roughly 3x the average size, with expansion rate as the leading sign of progress.

THE RISK

Potential bookings softness in the transition quarter, as sub-floor deals fall away before the larger ones close. And the human side: some deals our people are working right now will not survive this. We will name those together and reallocate the effort, not the blame.

Thank you
